Dynamic Full Stack Developer with a diverse professional background. I bring a unique blend of discipline, time management, teamwork, and problem-solving skills from my previous careers to my current role. My primary focus is to continually enhance my skills and contribute to a collaborative and friendly work environment.

| React.js | Node.js | Express.js | Javascript | Angular |
| Golang | Typescript | Tailwind-CSS | MongoDb | MySQL |

Education

IT Bootcamp (Amsterdam), Full Stack Web Development | Aug. 2022 – Feb. 2023 | [Curriculum](#) | [Certificate](#)

Comprehensive seven-month program covering HTML, CSS, JavaScript, ReactJS, NodeJS, MySQL, MongoDB, and real-life project experience.

Anadolu University-Web Design and Development | Sept. 2020-June 2021

Thanks to this program at the university, I learned the basics of web design and coding. I took courses on server and user management.

Gazi University (Ankara) | July 2015 – Aug 2019

Experience

Innoseis Sensor Technology-Software Developer | July 2023 - Jan 2024
My main task is to work with large data(100K nodes), quickly and efficiently retrieve it from the database and visualize the data effectively to the user.

- Made project faster, prevent lazy loading : Improved how we get big amounts of data by 30%, making it quicker for users.
- Used a tech called Go to make data move faster (25% quicker) and be more accurate.
- Created web pages that look good using Angular and Typescript, plus other tech tools. Made sure the pages load faster by fixing a big problem.
- Made maps look good using Leaflet, which was a bit tricky but fun.
- Added cool things like progress bars and infinite scroll to making it better for users.
- I made a demo and presentation twice, reported my work to my manager and the team, and we exchanged ideas. [Link](#)

IT Bootcamp-Trainee │ Aug 2022 - Mar 2023

- In the graduation project, we designed a web application from scratch with a team and I worked as a Full Stack Software Developer.
- I used various technologies like ReactJs, NodeJs, ExpressJs, MongoDB.
- Implemented robust user interaction mechanisms through authorization, authentication, and token systems, ensuring secure data access and responsive design.
- Leveraged Google Place API integration, enhancing the application's functionality and user experience.
- Utilized project management tools (Trello) for task assignment and Figma for design, contributing to an efficient and organized development process.

Lawyer at Celik Law Consultant │ July 2019 - Aug 2022
